Hello,

Welcome to the pleasure of WOOD CARVING WITH ROTARY POWER TOOLS! In this 2-day workshop, beginning students will learn the fundamentals of wood carving using rotary carving tools, and intermediate students will be guided in additional power carving techniques and styles. The emphasis will be on sculptural carving using flex-shaft-style rotary carving tools.

I just wanted to let you know about a few things regarding the facility and procedures:

- Please don't wear loose clothing when using the electric rotary carving tools. We have safety glasses, dust masks, and gloves available.
- Please turn off cell phones while in class.
- We have access to a small kitchen if you want to bring your lunch. It contains a refrigerator, microwave, toaster-oven, coffee maker, and espresso machine. There is no food service on campus on the weekends.

I will be supplying carving material and handouts for both sessions. Power carving tools and safety equipment are available, but if you have your own, you can bring them. You can take your carvings home at the end of the course.

Looking forward to working with you all,
Ron Cook
