FINE DESIGN
Habitat fundraiser showcases forward-thinking architecture

BY AMANDA SAVAGE

The FINE 2010 House, a forward-thinking abode in the Olympic Peninsula, is the creation of Habitat for Humanity Olympic Peninsula (H lookup). The house is designed to be energy-efficient and sustainable, with features such as a living wall, solar panels, and a rainwater harvesting system.

**IF YOU GO**

**FINE 2010 HOUSE**

**LOCATION:** West Side Olympic Peninsula

**OPEN TO THE PUBLIC:** Sun. 11 a.m.-4 p.m. June 12-13

**TICKET INFORMATION:** $10 adults, free for kids 12 and under

**FOR MORE INFORMATION:** visit habitatorgan.org

The FINE 2010 House is a showcase of innovative design and sustainable building practices. The house is built on a sloping lot with a living wall that filters pollutants from the air and reduces the need for artificial lighting. The living roof is covered in plants that absorb rainwater and provide insulation. The house also includes a solar power system and a rainwater harvesting system, which together help to reduce the home's carbon footprint.

Tour

In addition to the house, the FINE 2010 event includes a design competition, a workshop series, and a film festival. The competition invites architects and designers from around the world to submit proposals for a future FINE house.

One of the highlights of the event is the design competition, which invites architects and designers to submit proposals for a future FINE house. The competition is open to anyone, and the winning design will be built in the future. The design must be sustainable and energy-efficient, and it must include features such as a living wall, solar panels, and a rainwater harvesting system.

The design competition is just one part of the FINE 2010 event. The event also includes a workshop series, which offers opportunities for hands-on learning and skill-building. The workshops cover a range of topics, from sustainable building practices to green design.

The FINE 2010 event is a great opportunity to see the latest in sustainable design and to learn more about the benefits of energy-efficient and sustainable building practices. Whether you're interested in architecture, design, or simply in learning more about the environment, the FINE 2010 event is sure to offer something of interest.

**TOURING TIPS**

- **Comfortable shoes:** The FINE 2010 house includes a variety of unique and interesting features, so it's a good idea to wear comfortable shoes.
- **Weather-appropriate attire:** The event takes place outdoors, so it's a good idea to dress for the weather.
- **Water and snacks:** It's a good idea to bring water and snacks to the event, as the houses may not have facilities nearby.
